

METAL BRACES

- **Most Common Type of Braces:**

Metal braces are the traditional braces used to **straighten teeth** effectively.

- **Very Strong and Durable:**

Made of stainless steel, they are **less likely to break** and work well for all kinds of tooth corrections.

- **Constant Gentle Pressure:**

They work by applying **steady pressure** to move teeth into proper alignment.

- **Rubber Band Colors Available:**

Patients can choose **different colored elastic bands**, making treatment more fun for kids and teens.

- **Affordable Orthodontic Option:**

Metal braces are usually the **most economical** choice compared to ceramic or invisible aligners.

CERAMIC BRACES

- ✓ **Tooth-Colored & Aesthetic:** Ceramic braces are made of tooth-colored or clear material, so they blend with teeth and look less visible.
- ✓ **Work Like Metal Braces:** They give similar results to metal braces and are equally effective for most bite corrections.
- ✓ **Less Noticeable:** Ideal for adults or patients who want a more aesthetic brace option.
- ✓ **More Delicate:** Ceramic brackets can be more fragile compared to metal ones.
- ✓ **Slightly Costlier:** They are usually more expensive than metal braces due to their cosmetic appearance.
